PROFESSIONAL SUMMARY

Backend-leaning Informatics undergraduate with experience building production-style applications using Go, React, Kotlin, Docker, and MySQL. Developed microservices, REST APIs, native Android applications, and a dual-deployment portfolio supporting both a live backend and a static fallback from a single codebase. Seeking Software Engineering, Backend, Full-Stack, or Android internship opportunities.

EDUCATION

Universitas Pembangunan Nasional 'Veteran' Jakarta

Bachelor of Informatics | Expected Graduation: 2028

Relevant Coursework: Data Structures, Algorithms, OOP, Database Systems, Software Engineering, Operating Systems, Computer Networks

TECHNICAL SKILLS

Programming Languages: Go, JavaScript, Python, Java, Kotlin, PHP, C, C++

Frontend Development: React, Vite, Tailwind CSS, HTML, CSS, Responsive Web Design

Backend & Security: Go (Gin), Node.js (Express), Python (FastAPI), REST API, RSA/SHA Cryptography

Data & Machine Learning: Scikit-Learn, Predictive AI, IoT Data Processing

Mobile Development: Kotlin, Android Studio, XML Layouts, Room, Glide

Database, DevOps & Tools: MySQL, SQLite, Docker, Kubernetes, RabbitMQ, Git, Vercel, Grafana

PROJECTS

- **Employee Management & Attendance System** — Built a Docker-based microservices system independently using API Gateway, OAuth authentication, employee, and attendance services with Node.js, Express, Laravel, PHP, and MySQL.
- **WisataKita** — App Architect and Android Developer for a team-built travel application. Redesigned the UI/UX and implemented authentication, offline Room caching, OpenWeather and Geoapify integrations, and destination browsing.
- **Smart Crowd Control Platform** — Served as the Machine Learning Developer for an IoT crowd management system. Designed and developed real-time AI predictive models using Python, Scikit-Learn, and FastAPI to detect anomalies from sensor data within a Docker/Kubernetes microservices architecture.
- **SignVault: Digital Signature Archive** — Developed a secure document archiving platform featuring a custom Python API server and React frontend. Implemented RSA-PSS digital signatures and SHA-256 hashing from scratch to guarantee academic document authenticity and detect unauthorized tampering.
- **NBA Central Division Dashboard** — Architected a full-stack real-time sports analytics dashboard using React, Tailwind CSS, and Recharts. Built a custom Vercel Serverless backend (Node.js) to securely fetch and process live data from ESPN and Wikipedia APIs.

LEADERSHIP

Vice Head of Commission 3 (2026–Present):

Supervise 4 student organizations and lead 7 expert staff members while coordinating organizational evaluations and accountability.

Commission 3 Staff (2025):

Conducted monitoring and evaluation across faculty organizations.

Vice Project Officer Evaluasi Akhir Tahun BEMF-IK UPNVJ (2025):

Coordinated planning and execution of the faculty's annual evaluation event.
